Kerio MailServer named 2007 EDITOR'S BEST Award Winner by Windows IT Pro

August 9, 2007, Santa Clara, Calif. – Kerio Technologies today announced that its Kerio MailServer was named as a winner of the "Editor's Best Awards" in the Messaging Category by Penton Media's Windows IT Pro®.

"The 2007 Editor's Best Awards utilize our editors' product knowledge and subject matter expertise to identify exceptional products that have been covered in the pages of Windows IT Pro and its online newsletters, and which benefit the Windows IT Pro reader community," said Kim Paulsen, group publisher.

"Our editors are tough, in-the-trenches critics," Paulsen continued. "They demand solid value and performance from the products they select. Editor's Best Award winners can feel proud that the products and services they developed have earned the respect and recognition of the Windows IT Pro editorial staff. "

In contrast to its simple name, Kerio MailServer provides small businesses with a full groupware environment, including shared contacts and calendars, advanced Webmail and mobile device support, and integrated content filtering for spam and virus free email.

"The flexibility to fit into all types of SMB and Enterprise businesses makes Kerio MailServer the preferred messaging solution to our many hundreds of clients," says Kevin Klein, President of 318 Inc., a Los Angeles-based premiere technology services company providing solutions to leading SMB companies. "This award recognizes the hard work Kerio has done to make email collaboration in Windows environments straightforward and secure."

In its latest release, Kerio MailServer 6.4.1, Kerio focuses on the iPhone and introduces an easy way for organizations to synchronize email, contacts and calendars. Kerio MailServer provides a wide range of mobile email options, including Direct Push for Windows Mobile, Palm Treo, Symbian-based Nokia E and S Series smartphones, and RIM BlackBerry.
